Problem statement by Accenture

To build a Modern Support Ticket System

Our goal :

- Create a tracker for both Administrator and Customer
- Able to communicate/ follow up through our platform
(easier to track and update as compared to using email)
- Multiple Administrator can attend to one ticket
(to ensure faster response to the customer)

TICKETING SYSTEM

Stack

MONGODB

A popular open source database for modern apps

EXPRESSJS

Fast, unopinionated, minimalist web framework

REACTJS

A JavaScript library for building user interfaces

NODEJS

Javascript runtime built on Chrome's V8 JavaScript engine

Features

1. Create , read and update tickets
2. Notify user(s) when Admin replies
3. Add a reply (comment) to the ticket
4. Subscribe/unsubscribe to a ticket to get notified when replies are received
5. Notify Admin(s) when user reply
6. Filter tickets by ascending/descending date & status
7. Filter tickets by email and/or status
8. Manually reset password for the user

TICKETING SYSTEM

Testing Challenges

Backend

What do we test and how to test our web application?

To mock our database?

To mock GET/POST/PUT/DELETE requests?

TICKETING SYSTEM

Testing Challenges

Frontend

Unit testing

Integration testing

Suitable test cases for front-end testing

TICKETING SYSTEM

Demonstration

- 1) Submit contact form and logging in
- 2) Under Admin Dashboard: Ticket filter features
- 3) Once Admin replies to User's ticket, user will receives email
- 4) When User replies, Admin will then receive an email (only when user subscribes to ticket)

THANK YOU
