Project Meeting 3

1 Refinement and changes made since project meeting 2:

1. Integrated JUNIT test cases using Enzyme with JEST
 - a. For testing like buttons in our system
2. Iron out some of the bugs for the authentication system and do CRUD for ticket creation

2 Design of different subsystems via UML diagrams

Updated and near completion of the class diagram. In the previous report, we only did the class diagram meant for the user side, so this time, we've added the following:

- Admin side: reply to tickets and archive tickets
- User side: reply to their own ticket(s)

We have also come up with our UML sequence diagram for basic scenarios to reflect our product

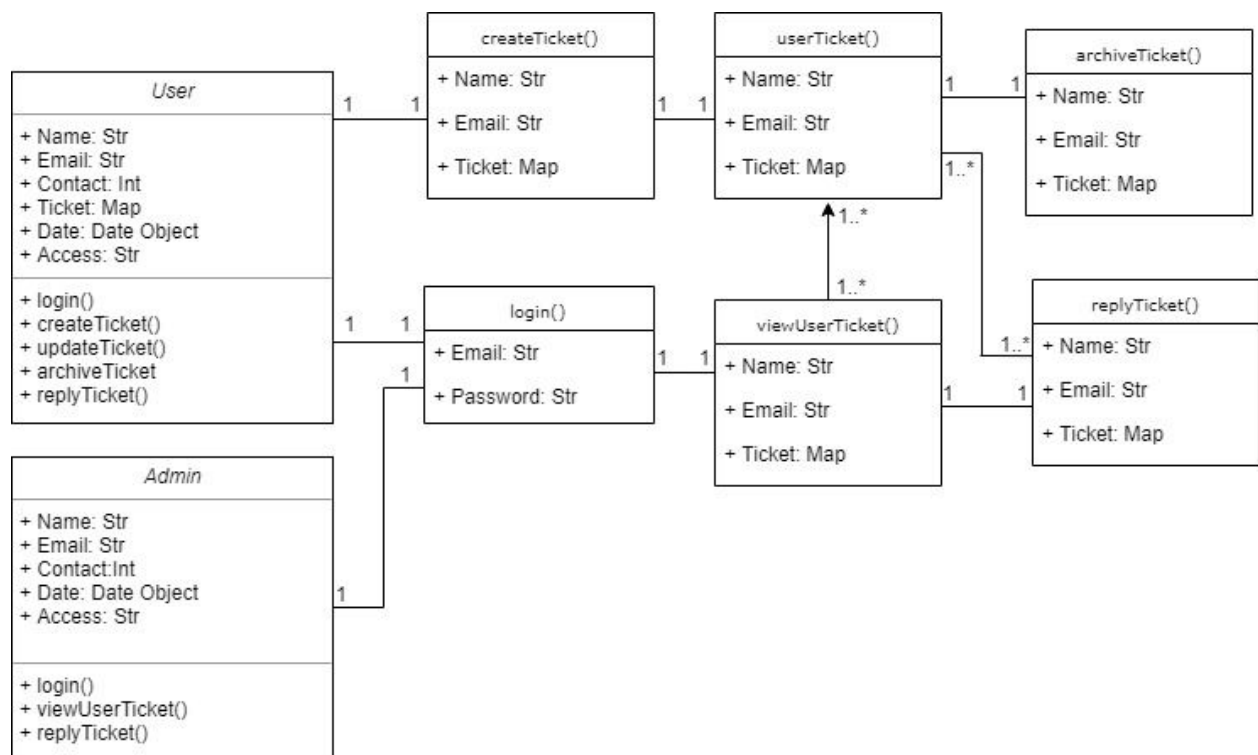

Figure 1: Extended class diagram for user and admin system

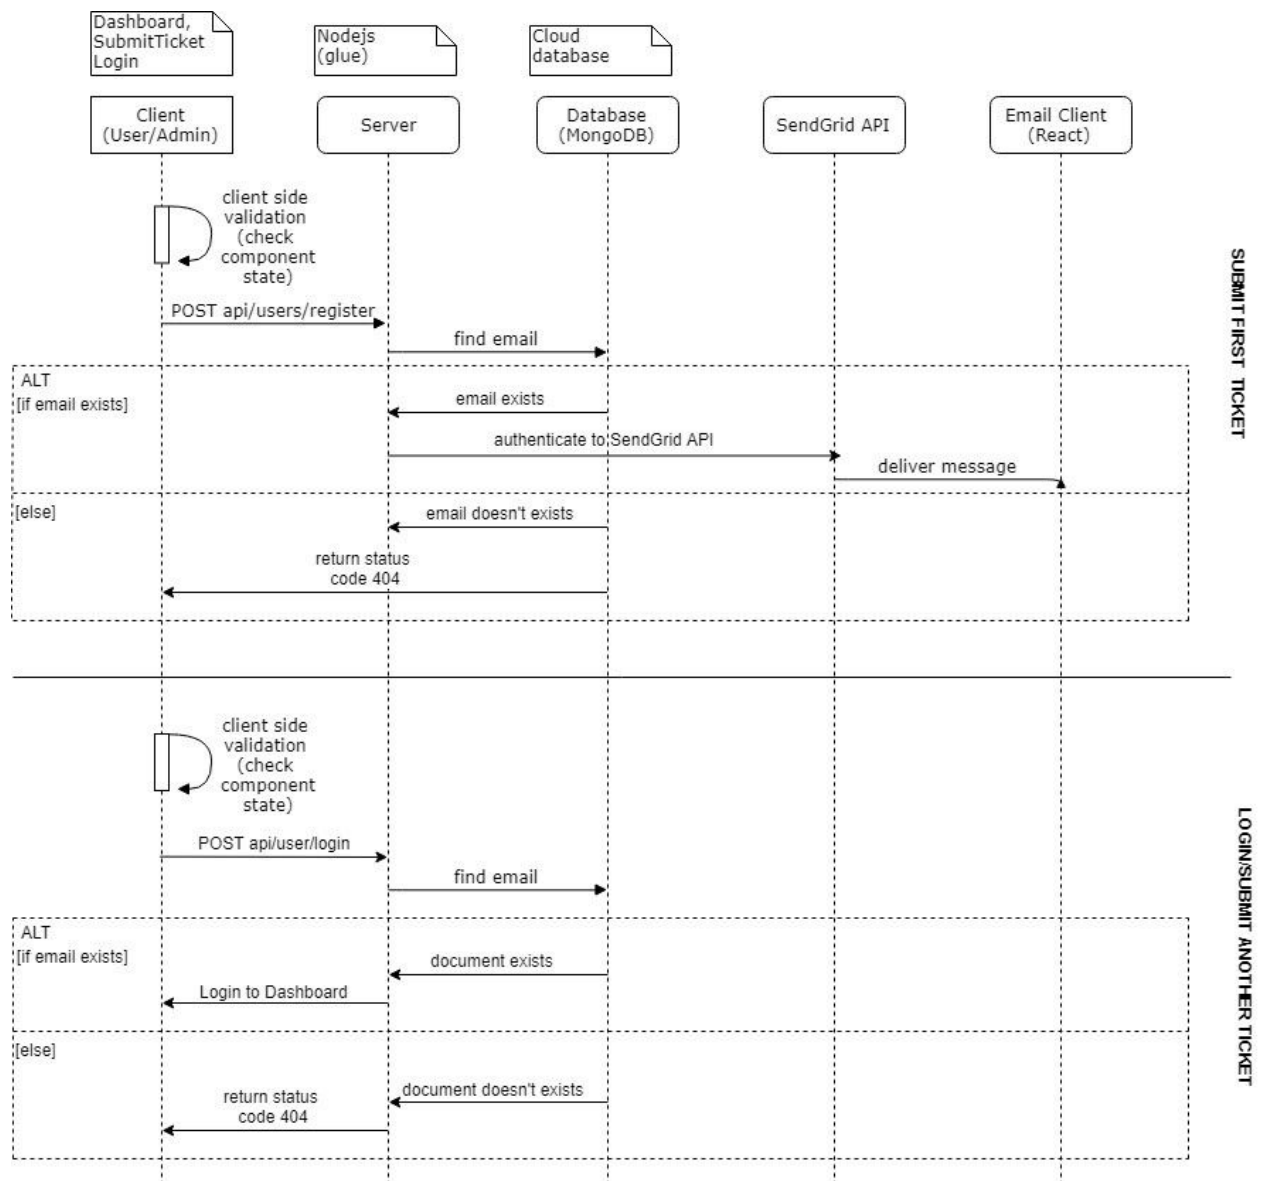

Figure 2: UML Sequence diagram for ticketing system
